INTRODUCTION

A sound book of reference ordinarily needs an Introduction no more than any good tool, expertly designed and well made, needs either justification or apology. A few simple directions for its intelligent use—chiefly, in this case, a key to the abbreviations employed in the following pages—should suffice.

But this, the Third Edition of *Chemical Who's Who,* is long overdue. Furthermore, the scope of the work has been somewhat broadened, and the adjective "chemical" in its title has been so interpreted in use that it is in cases only partially descriptive. Finally, this volume appears under the imprint of a new publisher. The user of the book deserves explanations of these changes.

This volume was scheduled to appear in 1942, five years after the publication of the Second Edition. In fact, the invitation list had been compiled and questionnaires through A and B in the alphabetical list were in the mail that fateful Sunday, the seventh of December, 1941, when Pearl Harbor was suddenly attacked. Under war conditions, with all personnel shifting and when book paper was under priority allocations, its publication was quite impractical.

In the meantime I had retired from active publishing in the chemical field, and it was plainly desirable, if this work were to continue permanently, to place it with an established publishing house. Not every publisher is equipped to compile and distribute a book of this kind, and what is most important, if the value of such a reference work is to be maintained, its publisher must adhere religiously to certain ethical editorial standards. Names to be included must be selected solely upon the merits of the position and accomplishments of the candidates. Biographical data published must be supplied first-hand by the selected leaders without even the implication of any obligation on their part to subscribe to the book. Having established *Chemical Who's Who* upon these principles, I am happy to turn it over to the Lewis Historical Publishing Company, fully assured that they have the equipment and staff, the resources and the integrity, to carry it forward as successfully as they have what are now its sister publications, "Who's Who in Engineering" and "Who's Who in New York."

One thing we can all look forward to confidently is the regular appearance of subsequent editions at three or four year intervals. To keep this biographical dictionary of the leaders in all sectors of the chemical field up-to-date will add immensely to its practical value. And the scope of this book has been broadened now to include all chemical leaders, not only the chief executives of chemical companies and their department heads and branch managers, but the superintendents of plants, the purchasing agents, librarians and directors of research; as well as chemical brokers and dealers, importers and exporters, and (an important addition to this edition) leaders in the field of chemical education.

The lapse of a dozen years and the exceedingly great expansion in every branch of chemical activity in the United States since the outbreak of World War II, have imposed upon this edition many of the handicaps of an initial publication of any "Who's Who." The working list of the men and women to be sent questionnaires had to be compiled fresh, almost from scratch. To many men the invitation to submit biographical information came from an almost unknown publication. Their failure to reply, through lack of acquaintance with this standard reference work, accounts for some notable absentees from the following pages, omissions due to the failure of these men to supply the necessary data and not to the fact that they did not receive invitations. We have published only authorized data.

By keeping the invitation list up-to-date, the first of these handicaps will be almost eliminated, and it is to be hoped that the well-proven value of *Chemical Who's Who* will continue it in the minds of the chemical fraternity as one of our "must" publications.

Despite its handicaps, the present edition is notably more complete and representative than its predecessor. Not only has its scope been broadened, as noted above, but it contains fifty per cent more biographies than the Second Edition. Those figures imply a promise for the future, one that I am confident will be made good.
